

**Client: A Mid Western Department of Public Safety**

This Mid Western state Department of Public safety was in the process of developing a system to keep track of the Vehicle Abstract requests coming in from individuals and prepaid accounts. It also sought to develop a Driving School and Instructor License System to keep track of Licenses for Driving Schools, Driving Instructors and Training Managers plus the system needed to keep track of Violations and Action taken against different Entities of schools.

Digitek consultants helped the state agency to design and develop this automated vehicle abstract system, an Intranet application, to create Vehicle Abstract depending on user input like Vehicle Identification Number, SSN, Owners Name, etc. This system keeps track of all the request received and deduction of appropriate amount from the prepaid accounts.

Digitek resource helped the state agency to design and develop the Driving School and Instructor License System, a client server application, to keep track of Licenses issued for Driving School , Driving Instructors, and Training Managers. The system also tracks the Violations and Action taken against different Entities of school.

Both the above systems are now in production helping the state agency achieve their goals.

**Technology Platform:** VB 6.0, ASP, COM, Oracle 8i/9i, Crystal Report 8.5, IIS
